PROFESSIONAL SUMMARY

CRM and business software developer with hands-on experience architecting and improving custom PHP/MySQL applications around real business workflows. Strong across CRM application logic, relational data design, workflow automation, payment integrations, access control, search/reporting, and live troubleshooting. Combines technical implementation with practical accounts-receivable operations, enabling clear translation of business requirements into maintainable software. Uses AI-assisted development to accelerate prototyping while retaining ownership of architecture, debugging, integration, testing, and validation.

TECHNICAL SKILLS

Backend: PHP, server-side development, OOP fundamentals, modular application design, validation, sessions, authentication, authorization, business rules
CRM: CRM development, clients/leads/contacts, business records, roles & permissions, custom fields, tasks, activities, notifications, admin workflows
Data: MySQL, MariaDB, SQL, relational data modeling, CRUD, joins/filtering, search, reporting queries, data integrity
APIs & Web: REST APIs, JSON, webhooks, third-party integrations, Stripe/payment workflows, HTML5, CSS3, JavaScript, AJAX, WordPress
Automation & Delivery: Scheduled jobs, automated reminders, billing/collections workflows, calendar synchronization, Git/GitHub, XAMPP, Apache, debugging, QA, technical documentation
Security: PDO/prepared statements, password hashing, CSRF protection, server-side permission checks, output escaping, file-upload validation, credential protection, activity/audit logging

PROFESSIONAL EXPERIENCE

Syed Professional Services Company (USA-based Tax Filing Company) | Faisalabad / Remote

Accounts Receivable Executive | CRM Functionalist & Lead Developer | Feb 2025 - Present

- Manage and verify invoices, billing records, payment follow-ups, and collection activity while improving CRM-supported workflows.
- Architected CRM enhancements across billing, client records, search, permissions, reporting, communication, and workflow modules; translated operational requirements into implementable features.
- Expanded a legacy invoicing workflow into a broader CRM platform with structured records, role-based access, activity tracking, and configurable business processes.
- Integrated and supported Stripe payment workflows, webhooks, automated invoice reminders, payment-status handling, and ACH-related billing processes.
- Designed relational MySQL logic for secure record handling, filtering, search, and reporting; built/refined internal messenger and comment-history logic for departmental communication.
- Used AI-assisted rapid prototyping for PHP/HTML starting points, followed by debugging, integration, refactoring, production-oriented QA, and live issue resolution.

Freelance Web & IT Assistant | Faisalabad / Remote

- Practical experience across WordPress, Blogger/Blogspot, HTML, C++, digital tools, content workflows, and client-facing problem solving.

FLAGSHIP PROJECT

GRAVITY CRM | Custom PHP / MySQL Professional Services CRM

- Designed the overall application architecture for users, roles, permissions, clients, leads, contacts, businesses, activities, tasks, notifications, settings, and global search.
- Implemented configurable fields, modules, icons, and layouts for different staff roles and business requirements; developed billing, collections, communications, reporting, and reminder workflows.
- Applied security controls including prepared statements, password hashing, CSRF protection, server-side authorization, output escaping, upload validation, credential protection, and activity logging.

EDUCATION & CAREER FOCUS

M.A. (Private) | Sargodha

Career focus: CRM development, PHP backend engineering, business software, workflow automation, CRM integrations, and AI-assisted application development. Open to remote international teams, project-based CRM work, and long-term software engineering roles.
